Pre-Driving Assessment Program

TIRR Memorial Hermann Outpatient Rehabilitation centers offer pre-driving assessments for people experiencing functional changes due to a neurologic incident, trauma, surgery or the aging process. It is an essential part of the driving assessment to address any deficits that may influence safety and independence as a licensed driver.

Medical conditions that may affect driving skills include:

- Stroke
- Acquired or traumatic brain injury
- Multiple sclerosis
- Parkinson's disease
- Dementia
- Alzheimer's disease
- Macular degeneration
- Glaucoma
- Neuropathy
- Cardiac disease

These conditions may affect vision, memory, attention, and the ability to problem solve and react quickly.

Licensed occupational therapists will formally assess the following:

- Vision
- Spatial awareness
- Attention
- Problem solving
- Sequencing
- Cognitive processing skills
- Reaction time
- Ability to read traffic signs
- Physical performance skills
- Sensation

Appropriate recommendations will be made and tailored to individual patient needs. The patient and referring physician will be informed of the recommendations, which may include:

- Return to or continue with independent driving
- Referral to a behind-the-wheel driving assessment

To make a referral or to schedule an appointment, please call 1.800.44.REHAB (73422), 713.797.5942 or fax 713.797.5988.
